OVERALL SEARCH HEALTH

25%

⚡ **SPA Rendering Detected.** This site loads all content via JavaScript — search engines receive a blank shell. The audit used sitemap probing, Google index checks, and Companies House data to recover findings. Scores marked + reflect Google's current view of the site. Fix JS rendering to unlock full potential.

STRATEGIC SUMMARY

BIGGEST WIN

Title Tag Is Keyword-Sharp

"1Drive Motors | Premium Used Cars London" — brand, category, and location all present. The one signal Google can read right now, and it's doing its job well.

BIGGEST RISK

Completely Invisible to Google

Zero pages indexed. No third-party listings. No Google Business Profile found. The site doesn't exist in any search engine or AI tool — not even as a named entity.

ROI OPPORTUNITY

Local Search Is Wide Open

"Used cars London", "premium used cars East London" — these are high-intent, high-volume queries with no 1Drive presence. One architectural fix unlocks the entire local search channel.

PRIORITY ROADMAP

CRITICAL

Fix JavaScript Rendering — Google Sees a Blank Page†

EFFORT

Every page on the site — homepage, About, stock listings — returns empty HTML to search engines. Until this is fixed, no other SEO work will have any effect whatsoever.

IMPACT

Evidence: web_fetch returns only the <title> tag. Zero body text, no headings, no nav links. site:1drivemotors.co.uk returns 0 indexed pages in Google.

Fix: Enable Server-Side Rendering (SSR) or Static Site Generation (SSG) in your framework (Next.js, Nuxt, SvelteKit etc.), or add a pre-rendering service like Prerender.io. Verify with Google Search Console URL Inspection after deploying.

CRITICAL**Claim Google Business Profile + Submit Sitemap**

EFFORT

No GBP found anywhere. Used car buyers search Google Maps first. Without a verified listing, 1Drive doesn't appear in the map pack — the most clicked local result format — even after the JS fix.

IMPACT

Evidence: Brand searches and Google Maps queries return no listing for 1Drive Motors. No sitemap found at /sitemap.xml or /sitemap_index.xml.

Fix: (1) Create and verify a Google Business Profile at business.google.com. (2) Generate sitemap.xml via your framework. (3) Submit to Google Search Console. These are independent of the JS fix — do them in parallel.

HIGH**Add AutoDealer Schema + Visible NAP to Every Page†**

EFFORT

No structured data found anywhere. Without AutoDealer JSON-LD and a visible address/phone in the HTML, Google can't connect this business to a location — locking it out of "used cars near me" results entirely.

IMPACT

Fix: Add JSON-LD type AutoDealer to the homepage (and ideally every page via layout): name, address, telephone, openingHours, geo (lat/lng), url, sameAs (GBP URL). Add NAP visibly to the footer in plain HTML — not just in JS. Keep identical across site and GBP.

HIGH**Make the About Page Crawlable — GEO Score Is Blocked†**

EFFORT

The About page exists but its content is locked behind JavaScript. AI search engines (Perplexity, ChatGPT Search) can't read it — so they can't verify or recommend 1Drive Motors to anyone asking for a used car dealer.

IMPACT

Evidence: About page URL confirmed by site owner. Content unverifiable — JS-rendered. No business description, staff names, or trading history found via any source including third-party searches.

Fix: Part of the overall SSR fix. Once rendering is resolved, ensure the About page includes: trading name, who runs the business (first name + role), how long operating, location, what makes the stock selection different. 300+ words minimum for GEO credit.

MEDIUM**Add Meta Descriptions to All Pages†**

EFFORT

None detected. These are the two lines of copy in a Google result that make someone click your listing. Missing them means Google writes them automatically — usually poorly — cutting click-through rate even once you start ranking.

IMPACT

Spec: 150–160 chars. Homepage example: "Browse premium used cars in London at 1Drive Motors. Quality-checked stock, transparent pricing. View current listings or call us today." Write unique descriptions for: homepage, stock listing page, individual car pages, About, Contact.

WHAT'S WORKING WELL

Well-Formed Title Tag

"1Drive Motors | Premium Used Cars London" — brand, primary keyword, and location in 42 chars. Exactly what Google needs to categorise the business.

HTTPS Active, Clean Redirect

Site resolves correctly on HTTPS with a clean root-to-trailing-slash redirect. Secure foundation — no mixed content warnings or certificate issues detected.

Legally Registered Entity

1DRIVE MOTORS LTD confirmed on Companies House (no. 16835524, SIC 45112). This is a genuine trust signal — once surfaced on-site it materially improves GEO scores.
